DETAILED ACTION

In response to the Examiner's restriction requirement, Applicant elected Group I (claims 1-17, 49, 52-58, 66, and 71) without traverse. Accordingly, these claims are examined below on the merits.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 49, 52, 53, and 71 are rejected under 35 U.S.C. 102(b) as being anticipated by Heth.

As per claims 1, 49, 52, and 71, Heth discloses an automatic temperature control system wherein a temperature modifying device is run to achieve a desired temperature, and wherein the air circulating system is run independently of the temperature modifying device (column 4, lines 19-22).

As per claims 2, 3, and 53, Heth discloses setting predetermined operating periods/intervals for the air circulation system (column 2, lines 36-38).

Claim Rejections - 35 USC § 103

Art Unit: 3744

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 4 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Heth.

As per claims 4 and 5, Heth does not specify the duration of the ON periods. However, official notice is taken these the system of Heth is capable of being set over a wide variety of time periods. It would have been obvious to one of ordinary skill in the art at the time the invention was made to adjust the system to operated for the recited time periods as a matter of design choice for the purpose of improving the efficiency of the system.

Claims 6-11 and 54-56 are rejected under 35 U.S.C. 103(a) as being unpatentable over Heth in view of Toth.

As per claims 6 and 54, Heth does not teach entering filtration information or creating a display during the control of thermal output. Toth teaches an air conditioning system filtration information is entered and displayed (column 4, line 63 – column 5, line 2). Since, as written, there is no direct connection within applicant's claim between the filter information and the air

Art Unit: 3744

circulating control, it would have been obvious to one of ordinary skill in the art at the time the invention was made to apply this feature of Toth to the system of Heth for the simple purpose of monitoring the filter status of the air conditioner.

As per claim 7, official notice is taken that these are common and typical filter duration periods.

As per claims 8 and 55, Toth teaches indicating that the filter needs to be checked (column 4, line 66 – column 5, line 2).

As per claims 9 and 10, since Toth teaches the third alternative of claim 8, the time and percentage representation features (which apply respectively to the first and second alternatives of claim 8) are not applicable.

As per claims 11 and 56, Toth teaches the filter output being based on the user input information and operation of the system (column 4, line 63 – column 5, line 2).

Claims 12-17, 57, 58, and 66 are rejected under 35 U.S.C. 103(a) as being unpatentable over Heth in view of Toth and Yoho.

As per claims 12 and 57, Toth does not teach the filtration display information being based sensor sensing a characteristic of the circulating system. However, indicating filter performance information based on such factors as air pressure is common and well-known in the art (see for example Yoho at column 7, lines 4-6). Accordingly, this feature would have been obvious to one of ordinary skill in the art for the simple purpose of further monitoring the efficiency of the filter of Toth.

As per claims 13, 58, and 66, Yoho teaches the characteristic being air pressure.

As per claim 14, Toth teaches a filter reset feature (column 4, line 63).

Art Unit: 3744

As per claim 15, Yoho teaches the pressure sensor being located near the filter (column 7, lines 4-6).

As per claim 16, official notice is taken that these are all common and well-known means of sensor communication.

As per claim 17, Yoho teaches determining the filter status indication based on the sensed air pressure.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marc E. Norman whose telephone number is 571-272-4812. The examiner can normally be reached on Mon.-Fri., 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Denise Esquivel can be reached on 571-272-4808. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
